State Lands Mapping Joint Subcommittee
10/25/2022 9:00am – 10:00am
Online Meeting via Teams

Attendees:
RMAC: Mark Hemmerlein, Michele Tremblay, Vicky Bunker, Larry Spencer, John Magee, LMAC: Shane Bradt
NHDES: Nisa Marks, Tracie Sales, Meaghan Rafferty

Michele Meeting Goals:
- o Put parcels in real world/statewide context
- o Pick a few parcels to look at as examples

- Mark provided a summary of the underlying data. See previous meeting summaries for more information.
- EMMIT and NHB – Who control the data want payment for use of the data.
- Vicky mentioned that Div. Historic Resources pulls a ½ mile radius when considering a project
- Each parcel is scored. Scoring is based on the number of resources in the parcel.
  - o Higher score = more of the resources of interest on that parcel. This scoring is based on a present/absent.

- Shane presented the dashboard.
  - o Ability to look at all parcels on same map.
  - o Ability to filter based on interest (highest rating, flood zone)
  - o The map can only do as much as the data source allows.
  - o Each parcel has a scorecard showing that parcels characteristic.
  - o Can search for parcel by address.
  - o Each parcel has an ID - do we want to keep that as the master ID for parcels?
  - o Statewide, 1228 parcels.
  - o Clicking on a parcel will display the resources associated with the parcel.
  - o This dashboard is not designed at the moment to work on a mobile device. A mobile friendly version could be created once the desktop version is complete.

- John asked if rating scores can be colorized so you can visualize what the score is for a parcel.
  - o Mark and Shane said is doable, will give it a try. Could also do a gradient of color.
- Victoria reminded people that a zero does not mean that an archeological resource is not present; it may mean no one has looked.
- Mark noted that the data will periodically have to be updated.
- Michele raised the point of access - should there be a password? If so, would it need to be change with membership turn-over.
- Shane said chairs and committee members should be able to access it. He proposed just one login and he will send login info.
- There will be not editing privileges.
- Tracie mentioned she thought it has been decided to make the map public.
- Shane proposes a temporary login, so can go through a refinement period.
- Larry asked if parcels could have contact information of local group, conservation commission, etc.
- Shane said there is the potential, but it would be time intensive.

- Tracie wants to circle back and change the designed river filter aspect of the map to be more accessible to LAC's (showing all the state lands).
- Michele asked if can see a presentation of a few parcels at a joint RMAC/LMAC meeting. The group looked at two recent SLR proposals.
- Group agreed are ready to present it to the full committees.

Action Items:

- Victoria will provide a definition of historical resource.
- Shane will experiment with adding colors to rating scores.
- Shane will email a link to view the tool to members of the committee.
- Tracie will follow up with Shane and Mark about how the LACs will be using the data.
- Michele will work with Shane and Mark to coordinate a presentation for a joint RMAC/LMAC meeting.
